

HP Financial — CA Practice Management Software

Project Requirement Document (PRD)

Document	Project Requirement Document (PRD)
Product	HP Financial — CA Practice Management Software
Version	1.0 (Phase 1)
Date	2026-06-25
Owner	it@farmkart.com
Status	Draft for review

Document workflow: PRD (this document) → **Technical Design Document** (`TECHNICAL_DESIGN.md`) → **Development**. No code is written until both documents are approved.

1. Overview

HP Financial is an internal web application for a Chartered Accountant (CA) firm to run its day-to-day practice in one secure place. Today this work — capturing enquiries (leads), onboarding clients, and tracking statutory/financial work (ITR, GST, etc.) with their fees — is scattered across spreadsheets, WhatsApp, and memory. This product centralizes it with employee logins, role-based access, a lead-to-customer pipeline, ten service workflows, fee collection tracking, a dashboard, reports, and reminders.

1.1 Goals

- Single source of truth for leads, customers, services, and fees.
- Clear ownership: every lead/job is assigned to an employee.
- Never miss a filing/follow-up: due dates, reminders, and overdue alerts.
- Full money trail: fees agreed, part-payments, mode (cash/bank), and who recorded each receipt.
- Secure handling of sensitive client and government-portal data.

1.2 Non-goals (Phase 1)

Client-facing portal, invoice/receipt PDF generation, WhatsApp/SMS messaging, two-factor authentication, multi-branch operations. (See \$10.)

2. Users & Roles

Role	Description	Access
Admin	Firm owner / manager	Full access: manage employees, masters, all leads/customers/jobs, fees, reports, settings.
Employee	Staff member	Operational access: work on assigned leads/customers/jobs, record fees on own jobs, view permitted lists. Cannot manage employees or system masters.

- Login identifier is the **mobile number**; access is governed by **role-based access control (RBAC)**, with a granular permission layer for future roles.
- Visibility of records and actions follows RBAC throughout (lists, buttons, pages, and reports).

3. Functional Requirements

3.1 Employee Login & Management

- **FR-1.1** Employees log in with **mobile number + password**.
- **FR-1.2** Login is blocked for **inactive** employees ("account disabled").
- **FR-1.3** Admin can **add an employee** with: name, mobile (unique = login ID), employee type (admin/employee), status (active/inactive), email (optional).
- **FR-1.4** On employee creation the system **auto-generates a password**, shown once to the admin to share; the employee must change it on first login.
- **FR-1.5** Admin can **reset an employee's password** from the CRM (re-generates a one-time password; forces change on next login).
- **FR-1.6** Admin can **edit** employee details and **toggle active/inactive**.
- **FR-1.7** Employees can change their **own password** from their profile.

3.2 Lead Management

- **FR-2.1** Capture a lead with: **Lead Type** (dropdown), **Name**, **Mobile**, **State**, **District**, **Tehsil**, **Village**, **Interested Category** (dropdown), **Contact Person**, **Follow-up Date** (optional).
- **FR-2.2** **Lead Type** and **Interested Category** dropdown options are **admin-managed** (add/edit without code changes).
- **FR-2.3** Leads can be **assigned** to employees.
- **FR-2.4** Lead list supports **search/filter** (type, category, status, assignee, follow-up date).
- **FR-2.5** Lead detail page shows an **activity/follow-up timeline** (notes, calls, meetings, status changes).
- **FR-2.6** Follow-up dates feed the dashboard "follow-ups due".

3.3 Customer Management

- **FR-3.1** **Convert Lead → Customer**, carrying over name, mobile, state, district, tehsil, village, and contact person; the source lead is marked *won*. Customers can also be created directly.
- **FR-3.2** Customer **profile** shows carried-over details plus editable fields: **Firm name**, **PAN number**, **Aadhaar number**, **GST number**, **Email**, **Bank/passbook** — the document-backed fields (PAN, Aadhaar, Bank/passbook) are captured as a **text value + optional document upload**.
- **FR-3.3** Uploaded documents are validated (type/size) and stored outside the public web root.
- **FR-3.4** Shared "**capture-once**" fields: **Firm name**, **GST number**, **PAN**, and **Aadhaar** are stored **once per customer** and **reused across all services**. They are **edited only on the customer profile** and shown **read-only** on every service form (never re-typed per service). The model is extensible so more shared fields can be added later without schema changes.
- **FR-3.5** A customer can be assigned **one or multiple services** from the service master; assigned services appear as sections/tabs on the profile.
- **FR-3.6** Customer list supports search/filter (service, status, assignee, location).

3.4 Services (10 services)

All services share a common **fees pattern** (§3.5) and an **admin-editable File Status** master. The **shared capture-once fields** (Firm name, GST number, PAN, Aadhaar — §3.3 / FR-3.4) appear **read-only** wherever a service needs them. Each service has its own fields/sub-types:

(1) Income Tax — sub-types **ITR**, **TDS**, **Audit**, **Other**. - ITR / Audit: financial year, due date, file status, fees. - TDS: **form type (24Q / 26Q)**, financial year, due date, file status, fees. - Other: free-text title + financial year, due date, file status, comment, fees.

(2) GST — three categories: - *Returns*: GST profile (GST number, user ID, form name, **filing type Monthly/Quarterly**); Monthly = **GSTR-1 (due 10th)** and **GSTR-3B (due 20th)**; Quarterly = same forms per quarter. Each return: due date, filing date, file status, fees. - *Registration*: firm name, **TRN**, **ARN**, GST number, user ID, file status (Submitted / GST Number Received), comment, fees. - *Audit*: **form type (9 / 9 & 9C)**, financial year, due date, file status, comment, fees.

(3) Accounting — **frequency (Monthly/Quarterly/Yearly)**, firm name, financial year, **due date (default 5th)**, file status, fees.

(4) Loan & Subsidy — sub-types: - *Udyam Registration*: firm name, due date, status, fees. - *CMA Report / Loan*: firm name, bank name, loan amount, loan officer name, loan officer number, comment, loan status, due date, fees.

(5) Mutual Fund — account open? (Yes/No → **UCC number**); **investment type multi-select (SIP / Lump Sum / Transfer)** with **target & achieved amount per type**; due date, status, comment, fees.

(6) **Insurance** — **insurance type multi-select (Health/Term/Vehicle/Claim Assist)**; referred by, company name, **policy type (Fresh/Port)**, status, comment, fees. If **Claim Assist**: + company name, claim amount, follow-up date, comment.

(7) **Government Department** — sub-types: - *Audit*: firm name, officer name, officer contact, audit type, financial year, due date, fees. - *GST*: firm name, officer name, office contact, user ID, password, **due date (default 10th)**, **form type (GSTR-7/other)**, status, comment, financial year, GST number, fees. - *TDS*: **form type (24G/26Q/24R)**, form name, officer name, contact person, officer contact, **TAN number**, with **conditional credentials**: TRACES ID/password + IT username/password (if TAN), AIN-24Q ID/password, AIN-26Q ID/password; due date, status, comment, fees. - **All stored portal credentials are encrypted at rest (\$6)**.

(8) **Certificate** — form name, certificate type, comment, status, due date, fees.

(9) **Deeds & Agreement** — firm name, type, status, due date, fees.

(10) **Company Compliances** — sub-types **Audit** and **Company Registration** (Phase 1); *Compliances* and *Other* (Phase 2). - Audit: form name, status, due date, financial year, fees. - Company Registration: firm name, **CS number**, **CS contact number**, **CS name**, status, due date, fees.

Firm-wide work board — a unified view across all service jobs with filters (service, file status, assignee, due-date range, financial year) and **overdue / due-soon** highlighting.

3.5 Fees Collection (shared across all services)

- **FR-5.1** Each service job has a total **agreed fee** and a **comment**.
- **FR-5.2** Fees can be collected as **multiple part-payments**; each receipt records **amount**, **payment mode (Cash/Bank)**, **received date**, **remarks**, and **who recorded it** with timestamp.
- **FR-5.3** The system computes **received total** and **outstanding balance**.
- **FR-5.4** Payments can be recorded/edited by **admin or the job's assigned employee**; every change is **audit-logged**.

3.6 Dashboard

- **FR-6.1 (Admin)** totals (leads by status, customers, active services), fees collected vs pending, due-soon & overdue jobs, follow-ups due, recent activity, employee workload.
- **FR-6.2 (Employee)** my leads, my follow-ups due today, my due-soon/overdue jobs, fees I collected.

3.7 Reports & Exports

Filterable reports with **CSV/Excel export**: - **FR-7.1** Leads (by type/category/source/status/assignee/date; conversion). - **FR-7.2** Customers (by service/location/assignee). - **FR-7.3** Per-service / job (status, due-date range, assignee, financial year). - **FR-7.4** Fees/collection (collected, outstanding, by mode/service/employee/ date). - **FR-7.5** Employee performance (jobs handled, fees collected, conversions).

3.8 Reminders & Notifications

- **FR-8.1** In-app **notification center** (assignments, due-date alerts, follow-ups, status changes).
- **FR-8.2** **Due-date reminders** with configurable lead time (N days before), generated by a **daily scheduled task** for service-job due dates and lead follow-ups.
- **FR-8.3** Phase 1 is **in-app notifications only**. **Email, WhatsApp, and SMS reminders are Phase 2** (no email reminders in Phase 1).

3.9 Audit Log

- **FR-9.1** Key create/update/delete actions and **all fee/payment changes** are logged with **who + when**, viewable by admin.

4. Admin-managed Masters

Admins maintain dropdown/option lists without developer involvement: Lead Types, Interested Categories, Services, File Statuses, Insurance Types, and app settings (reminder lead-time days).

5. Non-Functional Requirements

- **Platform**: Core PHP (no framework), PDO + MySQL/MariaDB, Bootstrap 5 UI.

- **Hosting:** Hostinger shared hosting, PHP 8.1+, HTTPS (free SSL).
 - **Scale:** 1–15 internal users.
 - **Usability:** clean, responsive back-office UI; fast common actions.
 - **Maintainability:** MVC structure, masters editable in-app, schema extensible for Phase 2 modules without rewrite.
 - **Reliability:** daily reminder job; database backups (operational).
-

6. Security Requirements

- Login by mobile + password; passwords stored with **bcrypt** (`password_hash`).
 - **Sessions** regenerated on login; secure + httponly cookies; idle timeout.
 - **RBAC** enforced server-side (middleware) and reflected in the UI.
 - **CSRF** tokens on all state-changing forms.
 - **Output escaping** (anti-XSS) and **prepared statements** (anti-SQL-injection) everywhere.
 - **Document uploads** validated and stored outside the web root.
 - **Government/third-party portal credentials** (TRACES, IT, GST, AIN) are **encrypted at rest**; visible only to admin + assigned employee.
 - Only the `public/` directory is web-exposed; `app/config/storage/.env` denied.
-

7. Data Entities (summary)

Employees/Users, Roles, Permissions; Lead Types, Interested Categories, Leads, Lead Activities; Customers, **Customer Attributes** (shared capture-once fields), Customer Services, Customer Documents; Services, File Statuses; one **job table per service** (+ GST profile, Mutual Fund investments, Insurance types, Govt Dept credentials); **Service Payments** (shared, part-payments); Notifications, Reminders, Settings, Activity Log. (*Full schema/DDL in the Technical Design Document.*)

8. Assumptions

- Internal-only application (no public/client login in Phase 1).
 - One firm / single branch.
 - Hostinger supports PHP 8.1+, Composer, and cron for the daily reminder job.
 - GSTR-1 monthly default due date captured as the **10th** (editable); to be confirmed against the firm's practice (statutory date is the 11th).
-

9. Open Items to Confirm

- Government Dept TDS "**24R**" form type — confirm exact form.
-

10. Phase 2 / Future Scope

- Company Compliances sub-types **Compliances** and **Other**.
 - **Email, WhatsApp & SMS** reminders and OTP.
 - Client-facing portal; invoice/receipt PDF generation; two-factor auth; multi-branch.
-

11. Acceptance (high level)

Phase 1 is accepted when an admin can: create employees and log in by mobile; capture and assign leads; convert leads to customers and upload documents; assign services and create jobs across all 10 services; record part-payments with the correct received/outstanding totals and audit trail; view the dashboard and run reports with CSV export; and receive **in-app** due-date/follow-up reminders — all over HTTPS with the security controls in §6 verified.
